Paper & Film Lamination

Our team of paper experts carefully qualifies each of our substrates to ensure that we are giving our customers the competitive edge to stay ahead

Specialty Paper

Sierra Coating Technologies is an industry leader in leveraging the unique characteristics and applications of specialty paper.

Toll Manufacturing

As a toll manufacturer, Sierra Coating can provide customers with a facility and manufacturing equipment to process their raw materials or semi-finished products.

Food Packaging

As a toll manufacturer, Sierra Coating can provide customers with a facility and manufacturing equipment to process their raw materials or semi-finished products.

Eco-Friendly Packaging

Investing in environmentally-friendly packaging is quickly gaining momentum in many industries, including food and beverage.

Product Packaging & Packaging Materials

Many major brands have come to realize the importance of using quality packaging that helps to either control or change the public's perception of their products.

Paper Coating & Laminations - Toll & Contract Manufacturing

Sierra Coating Technologies is a manufacturer of roll to roll coated or laminated papers, films or non-wovens. We have three machines to apply functional coatings that create improved performance of roll goods to impact the usability of the substrate. These functional coatings range from digital printing adhesion to barrier and water resistance to the latest in ecofriendly barrier heat seals.

Sierra laminates for the creation of new structural roll goods. We perform laminations of paper to paper to increase caliper or add block-out adhesive. We can also laminate metalized film to both paper and non-woven substrates to create barriers to light or enhance the printing surface for that all-important silver finish.

WE COAT EVERY JOB WITH QUALITY AND EXPERIENCE

Sierra uses a contract or toll manufacturer to create a full solution provider. Our team is highly skilled in the development of multi-supplier sourcing and can manage all types of Made to order coating agreements.

We are a GMP food grade manufacturing facility. Whether we are coating or

laminating, we can complete food grade or sustainable projects that provide superior product performance and convertibility.

INNOVATION - COMMITMENT - SOLUTIONS

Sierra can deliver product samples within weeks of receiving raw materials. We have three coaters that have access to six coating methods and two chemists on staff with paper expertise. Our team can begin full production upon receiving product acceptance and written specification.

IN GOES INNOVATION; OUT COMES SUCCESS

Sierra focuses on delivering the material performance you need at a cost you can afford. If you need a Super Material™ that works in your process, Sierra can make it!
